

Task-2.5

1. Update models

In Exercise 2.3, I included attributes like name, cooking time, ingredients, and difficulty to the recipes model. Now, I've extended it by adding picture and author attributes. This allows users to visualize the dish and know who posted it. The users model already had attributes like name and username. Now, I've added a picture attribute for uploading profile pictures and a bio attribute for users to introduce themselves to others.

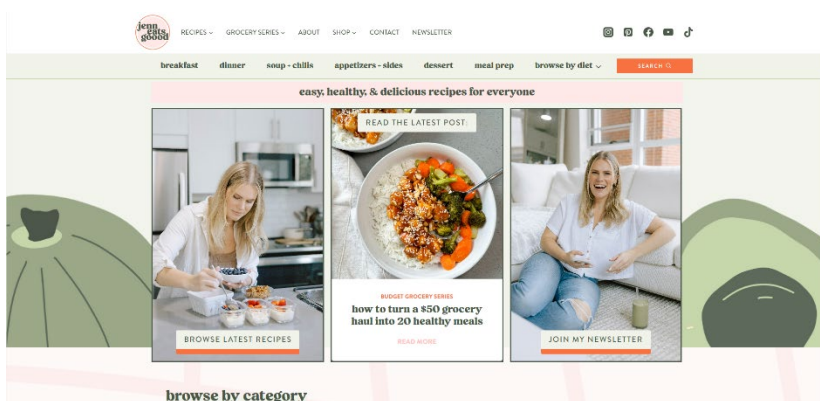

2. Frontend inspirations

<https://damndelicious.net/>

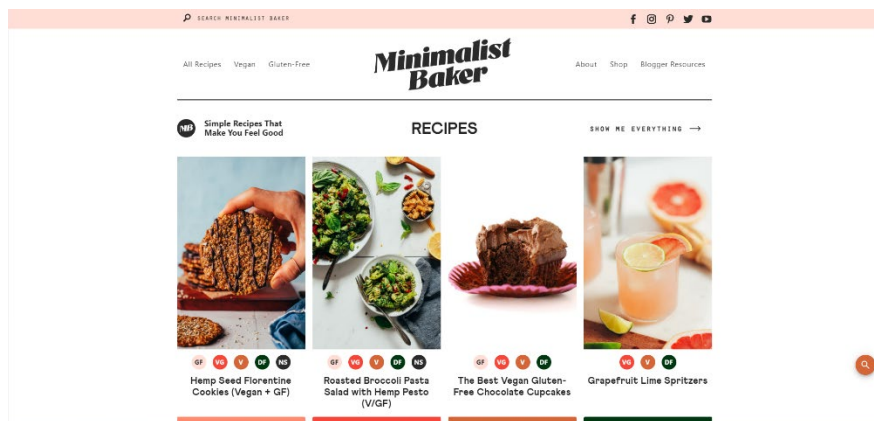

I like the clean and uncluttered appearance of this website. It maintains simplicity by employing a minimal number of menu items and featuring just three prominent images instead of numerous smaller ones.

<https://jenneatsgood.com/>

I like the color scheme maintained throughout this website, as well as the use of a background image.

<https://minimalistbaker.com/>

I like the way the menu bar is divided into two sections by the heading, giving it a cleaner appearance and drawing more attention to the heading. Additionally, the search bar with the pink background looks elegant and neat.
